

## ARTS Maestro™ Acoustical Panels

### *Crafted Designer-Inspired Decorative Acoustical Panels*

How can you improve a room visually and sonically without designing and installing an entire Acoustic Innovations, Inc. Theater? The solution is Maestro Panels

Maestro Panels are the solution for combining sound control and decorative accents in your home theater or media room. When properly located they offer a substantial sound correction benefit, resulting in proper soundstage localization, increased audio clarity and visual enhancement

When placed at a speakers' first reflection points; typically the sidewall boundaries and rear wall behind the main listening position, they will decrease reflected sound, which cause a blurring of the sound image and lack of intelligibility. The Maestro panels will also reduce the overall sound volume in the room, enhancing low level dialogue and environmental effects delivered over today's high quality audio systems.

The Maestro decorative acoustical panels are available in 5 standard sizes: 2' x 3', 2.5' x 4', 3' x 4', 3' x 4.5', and 3.5' x 5'. Plus, a 20" tall panel is available in matching widths for under chair rail applications. Custom sizes are also available. Three levels of acoustical control are available: absorptive, diffusive and a combination of absorptive and diffusive. Fax us a plan of your room and let us recommend the correct solution for your space.

Fabrics can be selected from a wide variety of styles and colors from our extensive collection. The frame is all solid hardwood, and available in mahogany, cherry, walnut and oak stains. Solid color painted wood is also available in 16 colors, as are custom sizes and finishes.
