

Determining the Location for Acoustical Control Products

A step by step guide to select the right materials

- Step 1: Establish the primary use of the room. Is it for Home Theater, Critical Listening or a General Purpose Media Room.
- Step 2: Calculate the volume of the room (length x width x height) to determine the cubic feet.
- Step 3: For Theater-use ARTS panels at Primary Reflective Zones, plus front and rear walls. Use one panel for every 200 cubic feet.
- For Critical Listening-use ARTS panels Primary Reflective Zones and rear walls.
- Step 4 Place panels so they are in line with the drivers of the speakers. Utilize full height panels if necessary, or incorporate our upper and lower matched Maestro or Symphony decorative panels.
